"Reliable Reporting"

GWR RESOURCES INC. (GNQ-V)

DRILLING CONTINUES - David St. Clair Dunn, consulting geologist for GWR Resources Inc. has reported assays for the first hole drilled at the Miracle-Murphy claims near Timothy Mountain, Lac La Hache area, B.C. Copper values are up to 0.1% and gold values are up to 400 ppb. Average copper values are approx. 0.05% and average gold values are 100 ppb over (177 feet). While these values are not ore grade, the total length of the potassic alteration zone encountered is encouraging. He says the possibility of intersecting ore grade copper-gold minerals in DDH 92-2 is very good.
