ALPHA GOLD CORP. (ALQ-V)				
TRENCH NO.	WIDTH METERS	ZINC %	GOLD OZ/T	SILVER OZ/T
1	1.5	4.87	0.004	0.2
1	1.5	16.47	.001	.15
1	1.5	4.04	.004	.24
1	1.5	7.37	.004	.28
2	1.6	32.08	.014	5.24
2	1.0	23.78	.012	1.07
2	1.2	13.72	.028	.87
2	2.0	1.16	.004	.24
Total Width of Massive Sulphide = 17 meters for Trench 2				
3	2.0	12.76	.028	.55
3	1.5	20.91	.032	.63
3	1.8	.41	.325	.99
3	2.2	1.87	.179	.94
Total Width of Massive Sulphide = 7 meters for Trench 3				
Cave Grab		.13	.325	.12

SOME HIGH ZINC WAS REPORTED IN TRENCH PROGRAM - Alpha Gold has reported the first phase of 1992 exploration results from the 100% property located 150 km NW of Fort St. James, B.C. The work has concentrated on the 4B zone, located 550 m NW of the No. 33 (oxide) zone drilled by Alpha in 1991. Massive sulphide mineralization has been uncovered in 7 bulldozer trenches over a strike length of 260 m occurring in Palaeozoic Cache Creek limestones, at the contact with a phyllite unit. Geochemical and geophysical data from previous operators suggest the zinc rich zone extends at least 500 m south of the 4B. This strike extension will be tested by excavator trenching, followed by drilling.
