ADRIAN RESOURCES LTD. (ADL-V)

MORE CREEK WORK BEGINS - Murray Pezim, chairman, Adrian Resources Ltd., reports the mobilization of a field crew to the More Creek project, located on More Creek about 45 km north of Eskay Creek, B.C. The property features polymetallic mineralization in stratigraphy similar to that hosting the Eskay Creek deposits. Previous sampling on the property returned assays of 0.071 oz. gold/t, 0.96 oz. silver/t, 0.50% copper, 0.50% lead and 2.80% zinc from the Main showing, and up to 0.226 oz. gold/t from a showing located 1,100 metres to the south. Work in progress consists of trenching the known mineralized targets to determine their potential along strike in either direction.

Adrian and joint venture partner, **HEMLO GOLD MINES INC.**, are earning up to a 100% interest in the BEAR 1-4 claims, which comprise the More Creek project. Hemlo Gold has elected not to contribute to the current trenching program, which will dilute its interest in the joint venture. (SEE GCNL No.126, 30Jun92, P.2 FOR OTHER PROJECT INFORMATION)
