

TASEKO MINES LTD. (TKO-V; TKOCF-Nasdaq)
FISH LAKE DEPOSIT WIDTH DOUBLES - Robert Hunter, chair-
man, Taseko Mines Ltd.,
reports the three-rig drilling program at the Fish Lake
deposit has significantly increased the size of the
copper/gold deposit, located 150 km southeast of
Williams Lake, B.C.

Previously reported results from an initial 10-hole
1991 drill program outlined a 600,000,000-ton reserve
block measuring some 1,600 feet east-west. The 1992
program has now extended the initial reserve block an
additional 2,300 feet east-west. SEE MAP OVERLEAF PAGE
2. At present, the deposit measures 3,900 feet
east-west, 2,200 feet north-south and up to 2,700 feet
deep. The deposit remains open to extension in all
directions; drilling is continuing with rigs in visual
copper mineralization.

On the eastern side of the deposit, 14 holes on
330-foot spacing, have been completed in and around the
initial 600,000,000-ton reserve block. These holes and
10 holes completed in 1991 returned average values of
0.29% copper and 0.015 oz.gold/ton or 0.80% copper
equivalent over an average thickness of 2,054 feet.
Detailed results above 0.4% copper equivalent cutoff
grade for holes completed by Taseko on the eastern side
of the deposit are listed on the table overleaf page 2.

Six widely-spaced drill holes have outlined a
western extension to the Fish Lake deposit and
effectively doubled its east-west width. Five of the
holes intersected shallow gold/copper mineralization -
above 0.4% copper equivalent cutoff grade with average
values of 0.18% copper and 0.012 oz.gold/ton or 0.61%
copper equivalent over an average thickness of 711
feet. Details in Table 2.

To date, 70,000 feet of large diameter core
drilling has been completed in the 1992 work program. A
revised mineral reserve estimate will be undertaken when
the limits of the deposit have been completely defined.
