

PACIFIC COPPERFIELDS INC. (PCF-V)

SURFACE SAMPLING EXTENDS - The first stage of a surface
GOOD GRADE COPPER exploration by Pacific Copper-
fields on the 100% owned Miner
Lake, Ken claim, project at Aspen Grove 30 miles north
of Princeton, B.C. has expanded the zone of copper
mineralization to 1,100 metres north-south, and for at
least 150 metres east-west. Mineralization remains open
in all directions. (SEE SURFACE SAMPLE ASSAY MAP
OVERLEAF). Sampling returned assays of finely
disseminated chalcocite to 2.6% copper from volcanic
rocks in an iron-poor alkaline porphyry system.
Continuous outcrop surface chip width samples returned:
0.29% copper over 25 m; 1.25% copper over 10 m; 1.0%
copper over 20 m. Incomplete drill records from
previous work suggest a change in mineralization from
chalcocite to chalcopyrite with depth. Thin section
studies have shown an association between alteration and
copper mineralization, similar to producing copper-gold
porphyry deposits. Robert B. Anderson, geologist,
president of Pacific Copperfields stated the scale of
intrusive porphyry targeted is expected to develop into
a mineable reserve in excess of 200,000,000 tonnes
grading 0.8% copper.

The previously sampled Cincinnati trench with
0.89% copper over 49 m and Q showing with 0.72% copper
over 13.0 m are within the 1100 m by 150 m zone. This
mineralized zone covers the east-central portion of the
claims. The area mapped and sampled represents less
than 15% of the property.

The claims cover 18 sq km and extend 6 km of strike
length of Nicola Group rocks. This area within the
Quesnel Trough, midway between the Afton mine and the
Princeton Copper Mountain Mine, has been termed
"elephant country" for the discovery of a bulk tonnage,
copper-gold alkaline porphyry deposit. Placer Dome Inc.
recently optioned the Shear claims on the company's

northern boundary and has begun a \$200,000 exploration program.

Pacific Copperfields Inc.'s activity has focussed on the central portion of the claim block 1600 metres south of Placer Dome's ground. Government mapping suggests that the geology of the central portion of the Miner Lake project extends at least to this northern boundary and onto Placer Dome's claims.

Pacific Copperfields name was changed Dec. 16, 1991 from ARTHURIAN RESOURCES LTD. following a reactivation program including three old for one new share consolidation and issue of 350,000 performance shares at 3¢ each. There are 4,918,657 shares issued, including 562,500 shares in escrow and after a private placement of 1,750,000 units at 15¢ each with warrants on 1,750,000 shares at 15¢ to Nov. 30, 1992, or at 17.5¢ to Nov.30, 1993. Pacific Copperfields acquired the Ken claims from MineQuest Exploration Associated for staged cash payment of \$145,000 and exploration expenditures of \$300,000 over three years. Director in additon to Mr. Anderson are John M. Darch and Dr. Gerald D. Wright.
