GREEN VALLEY MINE INCORPORATED (GVY-V)  
LAKWOOD MINING CO. LTD. (LKM-V)

DRILLING CONTINUES - Charles Boitard, president,  
Green Valley Mine, 50% and Lakewood  
Mining 50% reports the core drilling on the Wood  
property, south of the Afton Mine, ~~10 miles west of~~  
Kamloops, B.C. continues. SEE MAP OVERLEAF PAGE 1. The  
IP results show a north-south trend.

The DDH No. 92-2 is 850m south of DDH No. 92-1 and  
92-3 was drilling ahead on May 8, 1992, from 60 m east of  
92-1. No. 92-2 was drilled to 950 ft. where the rods  
broke in visible disseminated sulphides and the hole had  
to be abandoned. The consulting geologist has  
recommended a step-out hole 50m east of No. 92-2.

In 92-3 disseminated mineralization is visible from  
160 ft. this indicates so far on the three holes  
drilled, that IP results are meaningful.

The copper-sulphides identified by the consulting  
geologists are chalcocite, bornite and native copper.  
No assays have been received as yet and no proof that  
this large area of copper mineralization has any  
commercial value. The program is to test the IP targets  
mentioned in previous reports and to assess their  
geological and commercial values. (SEE GCNL NO.87, MAY  
5, 1992, P.3 FOR FURTHER INFORMATION)
