BARKHOR RESOURCES INC. (BHO-V)

CHAPLEAU RESOURCES LTD. (CHI-V)

CONSOLIDATED RAMROD GOLD CORP. (CYN-T; OTC-US; Berlin)

DRILL STILL IN SULPHIDES - William Daly, president, reports Chapleau Resources and joint venture partners Barkhor Resources and Consolidated Ramrod Gold are drilling ahead at 810 feet in the first drill hole on the Fors property 17 km south of Cranbrook, B.C. The hole is still in the sulphide-rich breccia zone. Since the last report in GCNL No.216, 9Nov92, P.1, the hole has intersected almost continuous zones of highly-altered breccia as well as what appears to be an altered dyke. Drilling will continue in an attempt to cross the alteration zone which has, to date, been intersected for about 600 feet. Some assays are expected later this week. Barkhor and Chapleau, jointly, can earn a 100% interest. Ramrod, subject to regulatory approval, have agreed with Barkhor and Chapleau to earn a 50% interest.
