BETHLEHEM RESOURCES CORP. (BTH-V,T)

RAIN CLAIMS GEOLOGY ENCOURAGING - Henry Ewanchuk, president, Bethlehem Resources has reported 5 diamond drill holes on the 100%-owned Rain property, 40 km north of Revelstoke, B.C. and 40km south of the Goldstream mine encountered a garnet horizon with multiple zones up to 1.5 feet wide containing up to 30% semi-massive pyrrhotite with traces of chalcopyrite and sphalerite.

The presence of the garnet horizon with zones of sulphides is geologically significant as it is similar to the garnet horizon structurally above the ore zone of the Goldstream mine and is considered an indicator of a Goldstream-type deposit. Exploration will continue.

Mr. Ewanchuk will retire Oct.31/92 as president but will continue as chairman and special projects co-ordinator. Brian Kynoch has been appointed president. (SEE GCNL No.186, 25Sep92, P.1 FOR OTHER DATA)
