## TROJAN VENTURES INC. (TJV-V)

TRENCHING PLANNED FOR NEW GOLD ZONE - Edward D. Raitt, president has reported discovery of the previously unknown mineralized zone lying to the east of the mineral zone currently being worked on the Gold Drop property at Greenwood, B.C. This new zone is known to extend 700 m and is 100 m wide. It parallels the known zone and is located 100 m to the east. Highly anomalous gold and arsenic values from analysis of soil samples led to the discovery. Heavy equipment will be moved to the site to start a trenching program in conjunction with the underground and other surface exploration currently be carried out.
