TOPPER GOLD CORP. [TGC-V]
GRAND NATIONAL RESOURCES INC. [GAA-V]
KEREMEOS DRILLING PLANNED - Peter F. Wishart, president, reports

Topper Gold plans to begin a 5,000-foot diamond drill program on the Kero gold vein in the Laredo-Puma property 8 miles north of Keremeos, southern, B.C., where the company can earn a 40% interest from Grand National Resources Inc. Work permits have been granted for 20 drill site locations. Induced polarization surveys are also planned on the Laredo-Puma property where two extensive polymetallic zones are known.

The high grade Kero vein structure lies 600 meters northeast of the

Laredo zone and has been exposed by drilling, blasting, drifting, backhoe and bulldozer trenching over an east-west strike length of some 2,000 feet. The Kero adit was driven north at an elevation of 3,300 feet, cross-cutting the Kero vein in heavy mineralization for 67 feet, stopping in mineralization due to timbering requirements. The arithmetic average of chip sampling from 13 trenches and chip samples from the face and walls of the adit yielded 1.027 oz. gold/ton, plus credits in silver, lead, zinc and copper. The Kero vein is open at both ends to extension and appears to be widening down-dip.
