FAIRFIELD_MINERALS_LTD. [FFD-V,T]
HIGH GRADE GOLD PROSPECT OPTIONED - John W.Stollery, P.Eng.,
has reported Fairfield
has optioned the two square mile, 20 unit, AU Property near Merritt,
B.C. located 11 miles northwest of Fairfields Siwash North Gold
Deposit. Fairfield may earn a 70% interest in the claims by incurring
\$150,000 in exploration costs and paying \$100,000 on or before

15Dec97. Thereafter the vendors must fund 30% of all costs or elect to

receive a 2% net smelter return royalty. Selected samples from the main showing on the AU Property have assayed 2.66 oz/ton gold and trenching has yielded 0.325 oz/ton over 16 feet with limited diamond drilling returning 0.145 oz/ton over 5 feet. A gold geochemical anomaly outlined in 1979 extends 1600 feet from the main showing. In 1991 a new showing was discovered near the north end of this anomaly and trenching has revealed a 2.5 footwide structure over a 25 foot length. Continuous chip samples across the 2.5 foot width near each end of the exposure have returned 1.308 oz/ton and 1.402 oz/ton gold.

Initial work will focus on re-defining and evaluating gold ; geochemistry.
