BEAU PRE EXPLORATIONS LTD. (BPD-V)

BULK SAMPLE SHIPPED - Robert C. Beaupre, president, reports Beau Pre Explorations Ltd. has shipped a three-ton control sample from the "C" reserve trench of the discovery zone at its Valentine Mountain project, southern Vancouver Island, B.C. to Nesmont Precious Metals in Ladner, B.C. for milling. Assay results are expected in early September. Collection of control sample 3 from the C trench is underway which, when completed, will provide Beau Pre with the average gold/silver grade along a 0.3-meter (1-foot) by 50-meter (150-foot) length. In addition, about 50 tons of mineralized wall rock has been stockpiled for future bulk sampling.

Six km northwest from the discovery zone in the C zone a small diamond drilling program is proposed to further explore an important target. Diamond drilling had intersected mineralized amphibolite grading about 0.193 oz.gold/ton over a 3-meter (10-foot) width, including a 1.265 oz. gold/ton intercept across 1 meter, with a weighted average of 0.708 oz.gold/ton over a minimum mining width.
