WHITE HAWK VENTURES INC. [WHV-V]

DEBBIE U/G WORK COMPLETED - James W. MacNeil, president, White Hawk Ventures Inc., has reported an underground crosscut and drift development exploration program has been completed on about 550 feet of the 900 Zone at the Debbie project located near Alberni, on central Vancouver Island, B.C. White Hawk has encountered four quartz veins ranging from 0.5 to 1.5 metres in width which intercept all known drill holes.

White Hawk is currently drifting east-west on one of the veins and will proceed to drive a raise upwards through diamond drill intercepts from No.50 and No.118 on its way to the surface. The existing drill hole No.118 contains a 25.- foot drill-core length which averaged 7.36 oz. gold/ton. White Hawk has taken samples on all four veins. The sample from the northwest wall of the vein at 8,900 metres, which has a 1.1-metre thickness at that point, averaged 3.672 oz.gold/ton. The sample from the east wall of the same vein, which has a 0.5-metre thickness at that point, averaged 0.92 oz.gold/ton. White Hawk intends to ship a bulk sample of 10,000 tons from the 900 Zone to Westmin's Premier mine operation for milling. White Hawk leases the 900 Zone portion of the Debbie property from WESTMIN RESOURCES LTD. [WMI-V,T,M]. Upon positive cash flow, White Hawk will receive between 50% and 75% of net revenue, depending on the head grade of the ore. (SEE GCNL NO.217, 12Nov93, P.6 FOR MORE DETAILS OF LEASING ARRANGEMENT)
