### WINSLOW GOLD CORP., [WGC-V]

**PHASE I DRILLING COMPLETED** - Hugh G. Ross, president, reports Winslow Gold Corp. has completed its phase one drilling program on its Rock Creek/Dayton Camp property located in south-central B.C. Geological gold assay results from drill cuttings of sample intervals of five feet has shown anomalous gold values are related to the sulphide contact at or near the altered intrusive metasediment, metavolcanic/volcanic contact.

Cuttings from drill hole 93-DCP-7 showed elevated gold values over the total drill interval of 185 feet. The company is currently assaying for gold over selected drill intervals based on these geochemical results. Hole 93-DCP-7 was collared in a gold in soil anomaly located 200 metres south of a 1990 reverse circulation drill hole that assayed 0.10 oz. gold/ton over 30 feet from 100-135 feet and contained a five-foot intercept of 0.505 oz. gold/ton within the interval from 120 -125 feet. About 125 meters east, a second 1990 reverse circulation drill hole assayed 0.056 oz. gold/ton over 35 feet from 50 - 85 feet and contained a five-foot section of 0.272 oz. gold/ton within the interval from 70 - 74 feet. A phase two diamond drilling program

will be starting immediately on the property. Winslow maintains a 10% working interest in the property and maintains an option to acquire a 100% working interest. Upon Winslow earning a 100% working interest, NORTHWIND VENTURES LTD. [NWN-V] will have the option to earn a 25% working interest in the property. (SEE GCNL NO.130, 8Jul93, P.2 FOR PREVIOUS PROJECT INFORMATION)
