## GRAND NATIONAL RESOURCES INC. [GAA-V] TOPPER GOLD CORE [TGC-V]

DRILLING COMPLETED/ASSAYS PENDING - Peter F. Wishart,  
president, reports

Grand National Resources and Topper Gold Corp. carried out a diamond  
drilling program on the Laredo Puma claims property near Keremeos,  
southern B.C. with encouraging results. Topper can earn a 40%  
interest in the property from Grand National.

A total of 5,000 feet was drilled to test the Kero Gold Vein(s)  
structure along an east-west strike length of about 2,000 feet at an  
elevation from 2,800 feet to 4,000 feet. The Kero Vein(s) is open to  
extension at both ends. To the west, the vein and three subsidiary veins  
are open towards the Laredo copper/gold/silver anomalous zone. The  
zone was sampled, assayed and mapped over a length of more than 1.5  
miles and widths exceeding one-half mile and is open to extension to  
the southeast and to the southwest. Negotiations with a major  
company interested in participating in the project are continuing.

Drill core logging and the splitting shows mineralization over 51  
feet. The core is being prepared for assaying. Some of the assay  
results should be available about July 1, 1993.

Grand National also reported the private placement for 500,000  
units at 49¢ per unit was fully subscribed. The warrants are exercisable  
at 49¢ per share the first year and 55¢ per share the second year. As of  
30Apr93, Grand National had 5,904,708 shares outstanding. (SEE  
GCNL NO.79, 26Apr93, P.2 FOR PREVIOUS INFORMATION)
