GRAND NATIONAL RESOURCES INC. [GAA-V]

TOPPER GOLD CORP. [TGC-V]

FIRST KEREMEOS ASSAYS RECEIVED - Peter Wishart, president, reports Grand National Resources Inc. and Topper Gold Corp. have received preliminary assays from the recently completed first round of diamond drilling on the Kero gold vein structure on the Kero-Laredo-Puma property located near Keremeos, southern B.C. SEE TABLE OF ASSAYS OVERLEAF P.1. Topper is earning a 40% interest from Grand National.

The drilling was designed to confirm the tenor of the mineralization and the down-dip extension of the Kero vein structure. The east-west trending Kero zone has already been exposed over a strike length of about 2,000 feet by a combination of rock drilling, blasting, bulldozer and backhoe trenching and drifting. A four-mile road has been built to access the Kero vein structure and the east side of the Laredo copper/gold/silver anomalous zone. The Kero vein structure runs from 2,800 to 4,000 feet in elevation. The Kero vein and three subsidiary veins at the west end of the structure are open to extension along strike towards the Laredo zone.

The next work phase after complete analysis of the assays and geological information from the logged cores will be to conduct an induced polarization survey over the large Laredo copper/gold/silver anomalous zone in preparation for diamond drilling. The Laredo zone has been sampled, assayed and mapped. A zone with a length of greater than 1.5 miles and 1/2 mile wide has been outlined and is open to extension to the southwest and southeast. Further samples are being prepared and shipped for assaying. (SEE GCNL NO.115, 16Jun93, P.3 FOR PREVIOUS PROJECT INFORMATION)
