HIGH GRADE SILVER INTERSECTED - M. H. Lavasseur, president, reports La Rock Mining Corp. has received assay results from diamond drill hole MS-93-1, located in the Main showing area on the Brandywine Creek property 30 miles north of Squamish, B.C. See table of assays above. The company has a 100% interest, subject to a 0.5% net smelter return royalty. La Rock is drilling a massive sulphide deposit in the Callaghan Creek area and testing other areas of interest. Holes 2 and 3 were stepped-out some 270 feet to the northeast and intersected a mineralized zone similar to hole 1. The holes are being split and sent for assay. Another diamond drill program will start this month. (SEE GCNL NO.61, 29Mar93, P.3 FOR PREVIOUS PROJECT DETAILS)
