NO. 222 (1993)  
 NOVEMBER 19, 1993

NOV 20 1993

**CANASIL RESOURCES INC. [CLZ-V]**

1993 FIELD RESULTS - Paul Weishaupt, president, reports Canasil Resources Inc. has received results from four large diameter HQ drill holes totalling 957.1 meters on the Brenda property, located in the southern Toodoggone gold/copper camp in north-central B.C. The 1993 drilling has substantiated the gold vein character of the porphyry copper mineralization in the White Pass area of the Brenda property. Drill results are as follows:

HOLE NO.	INTERVAL METERS	LENGTH METERS	GOLD G/T	COPPER %	SILVER G/T
93-01	9.14-57.0	47.8	1.10	0.130	4.8
93-02	16.00-134.0	118.0	.40	.054	.4
	234.0-266.0	32.0	.62	.116	.7
93-03	12.2-121.0	108.8	.48	.144	1.0
93-04	15.0-40.0	25.0	.44	.103	.5
	178.0-193.0	15.0	.46	.054	6.6

Geochemical and geophysical surveys were completed over the expanded White Pass Grid. The soil geochemical, magnetic, induced polarization and resistivity surveys outlined anomalies which correlate with the gold-copper mineralization. These anomalies remain largely unexplored. Additional diamond drilling is required to fully delineate the reserve potential of the Brenda porphyry gold/copper deposit.

Last June, the VSE approved an agreement by which United Minerals Services Inc., a private company controlled by Robert Dickinson, assigned its option to earn a 100% interest in the Brenda property to **ROMULUS RESOURCES LTD. [RRU-V]**, subject to a 10% net profits interest, by issuing 200,000 Romulus shares to United and spending \$1,600,000 on exploration. United can back-in for 50% of Romulus' interest in consideration of 50% of the expenditures of Romulus. (SEE GCNL NO.38, 24Feb93, P.3 FOR PREVIOUS DATA)

A trenching and sampling program was conducted on Canasil's Granite property in the Aiken Lake region of north-central B.C. Previous work by other companies has identified gold/silver mineralization in volcanic and intrusive rock, but their interpretation of results was inconclusive. Through current field work, Canasil's crews have confirmed the presence of a gold/silver bearing systems on the property. Results for the Granite property are as follows:

	SAMPLE WIDTH METERS	GOLD G/T	SILVER G/T
No. 2 Shear	4.0	5.00	41.6
	3.0	4.64	82.4
	1.2	19.40	546.7
	1.2	6.68	222.1
	2.0	1.45	26.1
No. 3 Shear	0.5	43.80	213.1
	11.0	1.80	9.8
	7.0	1.80	10.6
	5.0	5.50	29.5
	3.0	3.10	18.7
	2.0	4.70	22.8

The company is currently evaluating all data from the sampling program to plan exploration on the gold-bearing targets. Canasil can earn a 100% interest in the Granite claims, subject to a 2% net smelter return royalty, by paying \$10,000 and issuing 300,000 shares in stages upon completion of phased exploration programs, plus a further 100,000 shares upon commercial production and spending \$1,000,000 on exploration over four years. (SEE GCNL NO.116, 17Jun93, P.3 FOR PREVIOUS PROJECT INFORMATION)
