NO. 204 (1993)
 OCTOBER 25, 1993

TOBA GOLD RESOURCES LTD. (TGB-VI)

On the Mam gold property in the Kruger Mountain area just west of Osoyoos, B.C., past work on the main vein zone has returned surface samples of 3.15 oz. gold/ton and core samples that assayed 2.52 oz. gold/ton over 10 feet and 2.48 oz. silver/ton over 14 feet. Two batches of vein material from the Osoyoos property were mill tested in 1986. The results were as follows:

BATCH #1 - Weight 74.79 tons

Mill Heads	Flot Feeds	Flot Con	Final Tails
Au 0.14 oz/t	Au .114 oz/ton	Au 6.36 oz/ton	Au .06 oz/ton
Ag 0.30 oz/ton	Ag .41 oz/ton	Ag 26.02 oz/ton	Ag .02 oz/ton

BATCH #2 - Weight 115.79 tons

Mill Heads	Flot Feeds	Flot Con	Final Tails
Au.16 Oz/ton	Au.10 oz/ton	Au 2.54oz/ton	Au.0060z/ton
Ag .02 oz/ton	Ag .10 oz/ton	Ag 6.28 oz/ton	Ag .03 oz/ton

In 1990, Toba Gold completed the first phase of drifting on the No.3 adit. The adit has been driven to a length of 90 feet along the mineralized vein which is averaging three feet in width. Channel samples taken at regular intervals along the vein returned:

Sample	Width (feet)	Results in opt	
		Au	Ag
870701	3.0	2.33	1.57
39851	3.0	0.81	0.45
39853	2.3	0.82	0.70
39855	1.5	2.00	1.10
39904	2.6	0.54	0.52

A consistent grade of 0.40 oz. gold/ton over mining width is forecast to be maintained. The results received from sampling a 1.15-foot width of wallrock were 0.10 oz. gold/ton and 0.11 oz. silver/ton, demonstrating mineralization is spreading from the vein with depth. Further work on the No.3 adit is planned for the spring of 1994. A private company has acquired an option to earn a 50% interest in the Mam property from Toba by: paying \$25,000 by Nov. 15, 1993, and

spending \$125,000 on exploration by May 17, 1994.
