## LA ROCK MINING CORP.

[LAR-V] 9,944,120 shs.

BRANDYWINE DRILLING UPDATE - Dr. Robert E. Lee, president, La Rock Mining Corp., has reported receiving additional drilling results from the Dave's Pond gold zone on the Brandywine property, 40 km north of Squamish, B.C. La Rock has a 100% interest subject to a 0.5% NSR. See map GCNL NO.58, 24Mar94, overleaf P.2.

Hole DP 94-7 was drilled at -45° (Azimuth 025°) to a total depth of 348 feet and intersected 0.387 oz.gold/ton over 6 feet (222.0-28.0 ft) [including 3 feet of 0.691 oz/t]. Two additional holes have also been completed. DP94-8, -45° (Az 025°) was drilled to a total depth of 238 feet and intersected variably altered and mineralized rock over 40 feet

(131-172 feet). DP 94-9, -45° (Az 025°) was drilled to a total depth of 570 feet. This hole intercepted variably altered rock over 36 feet (487.5-523.0 ft). Within this interval, there are well mineralized sections with abundant pyrite, hematite and well mineralized sections with abundant pyrite, hematite and lesser galena. DP94-9 is the deepest hole completed to date and confirms the depth potential of the oriferous Dave's Pond shear zone.

The Dave's Pond shear zone (115°/75° S), is up to 100 feet thick and of unknown strike length (greater than 200 feet), being open at both ends and to depth. Assays from DP94-8 and DP94-9 are pending.

DP94-10, -45° (Az 025°) is in progress and is being drilled to test the up-dip extension of the gold mineralization intersected in DP93-4, the discovery hole which returned 74 feet of 0.222 oz. gold/ton. (SEE GCNL NO.58, 24Mar94, P.4 FOR PREVIOUS PROJECT DETAILS)
