FURTHER HUCKLEBERRY ASSAYS - Alan Savage, president, reports New Canamin Resources Ltd. has received further assays from the drilling program at the 100%-owned Huckleberry project located 70 miles east of Kemano, B.C. All of the diamond drill holes reported above are from the south-west extension to the Main Zone. The map overleaf P.1 identifies this area and locates holes 94-140 (0.415% copper over 200 ft) and 94-142 (0.679% copper over 500 ft) therein as well as a number of other previously completed 1994 Main Zone drill holes. Holes 94-134 to 141 are westerly exploration holes in the area of the Main Zone western extension.

A map of the previously reported East Zone drill locations is also overleaf P.1. The East zone program has one drill extending the deposit to the east while the other conducts a series of -60° infill drill holes at an azimuth of 205° across the deposit. (SEE GCNL NO.64, 5Apr94, P.1 FOR PREVIOUS DRILL RESULTS)
