MORE GOOD COPPER GRADES CUT - Alan C. Savage, president, reports New Canamin Resources Ltd. has received assay results from the first drilling at the East Zone Extension of the 100%-owned Huckleberry copper deposit located 70 miles east of Kamano, B.C. **SEE MAPS AND CROSS-SECTION OVERLEAF P.1.** Three holes completed on cross section 1600 represent the first sequence of drilling designed to extend the East Zone in an eastward direction. The holes were drilled in porphyry intrusive as opposed to the hornfelsed volcanics which hosted previously good East Zone drill results. For consistency, diamond drill hole 93-83, the last 1993 hole in this direction, is released now as it forms part of the cross section. In order, the holes proceed from south to north across the section from 94-150 through 93-83, 94-147 and 94-148 a distance of approximately 650 feet. The successful completion of this section extends the strike length of the East Zone to greater than 700 meters. East Zone extension holes have been drilled for a further 200 meters east of section 1600 with assays pending. (SEE GCNL NO.65, 6Apr94, P.1 FOR PREVIOUS DRILL RESULTS)
