BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 4,046,235 SHS.

HEARNE HILL DRILLING - Hugh Grenfal, president of Booker Gold Ex-
TO COMMENCE plorations Ltd. has reported the
drilling program on its optioned Hearne
Hill property 65 km northeast of Smithers, B.C. will begin
immediately. The current drill program has been laid out to test seven
geophysical targets that have a magnetic signature similar to that of
the Chapman Zone.

The distinct magnetometer low on the Chapman Zone has been
drilled by percussion drill and diamond drill. The percussion drill hole
was drilled at -60°, azimuth north. The diamond drill hole, 100 feet
north, was drilled at -45°, azimuth ESE. The percussion hole averaged
2.08% copper and 0.02 oz.gold/ton over 250 feet. The diamond drill
hole averaged 2.21% copper and 0.04 oz.gold/ton over 250 feet. The
Chapman Zone and the new anomalies are all within or peripheral to a
large porphyry copper system.

Booker can earn a 100% interest in the project, subject to
royalties totalling 4% of net smelter returns. The company has only to
issue 50,000 shares to exercise the option. (SEE GCNL NO.74,
18Apr94, P.2 FOR PREVIOUS PROJECT INFORMATION)
