## NEW CANAMIN RESOURCES LTD.

[NNT-V] 9,333,824 SHS.

MORE GOOD HUCKLEBERRY ASSAYS RECEIVED - Alan Savage,  
president.

reports New Canamin Resources Ltd. has received assays from three exploration drill holes situated northwest of the Main zone at the 100%-owned Huckleberry project located 100 km southwest of Kitimat, B.C. See top table overleaf P.1 and drillhole map overleaf P.2. It cannot yet be determined if this mineralization is associated with the Main zone or if it represents a new zone, possibly associated with the copper geochemical anomaly. Additional geochemical work and further drilling is planned to follow up these encouraging intercepts.

New Canamin has been delayed in drilling the gold/copper anomaly north and east of the East zone. Due to the fire fighting season a helicopter was unavailable. Drilling is now underway. The lower table overleaf P.1 lists additional East zone in-fill drilling.

The Huckleberry project hosts proven and probable in-situ reserves of over 175,000,000 tons grading 0.475% copper, with molybdenum, gold and silver by-product credits. A feasibility study is in progress. There is potential to expand reserves to over 200,000,000 tons. (SEE GCNL NO 135, 14Jul94, P.1 FOR PREVIOUS PROJECT INFORMATION)
