New Canamin Resources Ltd. is developing the Huckleberry porphyry copper property. The property is 100% owned and is not subject to any underlying royalties. It is situated approximately 100 km south-east of Kitimat in B.C. Proven and probable in-situ reserves are over 175,000,000 tons grading 0.475% copper, with molybdenum and gold and silver by-product credits. A feasibility study is in progress. There is potential to expand reserves to over 200,000,00 tons. (SEE GCNL NO.135, P.1, JULY 15, 1994, FOR PREVIOUS DETAIL)
