B.C. PORPHYRY COPPER TARGET ACQUIRED - Hera Resources has reported

acquisition of the Nakinilerak (Nak) copper/gold porphyry property near the Bell Copper mine in the Omineca Mining district, 50 miles north of Smithers, Babine Lake, B.C. Acquisition terms are not reported. Previous limited drilling on this property by Noranda identified a large porphyry target with significant copper values of 0.14 to 1.14% plus gold values of 0.01 and 0.02 ozs. per ton.

Mines in the vicinity include Noranda's Bell Copper Mine which produced 658 million pounds of copper, 405,000 oz. gold (with grades of 0.005 opt.) and 1.244 million ozs. of silver. The Granisle Mine produced 472 million pounds of copper, 148,000 ozs. gold and 1.9 million ozs. of silver.

Babine Lake area porphyries typically are high grade copper with significant gold and silver numbers. There are 10 other known deposits in this Babine area. The Nakinilerak property is the largest known hydrothermal alteration zone in the district, some 10 times as large as any of the others. Further exploration is planned.
