BOOKER GOLD EXPLORATION LTD.

[BGE-V] 4,357,035 SHS.

HEARNE HILL ASSAYS RECEIVED - Hugh Grenfal, president,

Booker Gold Explorations Ltd., reports assay results from DDH-94-7 on its Hearne Hill project located 65 km northeast of Smithers and 15 km of the Bell Copper Mine in the Babine Lake District of B.C. The property is 100%-owned by Booker Gold subject to a 4% NSR, which is subject to a buy out of cash or shares.

DDH-94-7 is located 50 metres north of DDH-94-5 and was drilled at a 55° angle, azimuth 332°. The top 411 feet cut across a well altered argillic zone average 0.115% copper. The remainder of the hole, 411 to 702 feet (291 feet) averaged 0.5% copper and 0.21 grams gold/tonne (0.006 oz/ton) for a copper equivalent of 0.6% copper over 291 feet. This includes 60 feet of 0.93% copper and 5 feet of 2.42 grams gold/tonne (0.07 oz/ton). The zone appears to increase in grade to the northeast. The better intersections across the zones are given below:

INTERVAL FEET	LENGTH FEET	COPPER %	SILVER GRAM/T	GOLD G/T
553-558	5.0	0.657	1.8	0.20
558-559	1.0	0.555	1.4	0.21
559-564	5.0	1.13	2.7	0.23
564-569	5.0	0.924	2.0	0.22
569-574	5.0	0.869	1.9	0.17
574-579	5.0	1.650	3.6	0.25
579-584.6	5.6	2.064	4.8	0.35

Some gold values are erratic on repeats and will be retested for free gold, in the past native gold analysis has increased gold values. Assay will continue to be released as they are received. (SEE GCNL NO.223, 22Nov94, P.2 FOR PREVIOUS DRILL RESULTS)
