MAJOR DRILL PROGRAM STARTS - Alan C. Savage, president,
reports New Canamin

Resources Ltd. has begun a minimum 10,800-meter diamond drill
program on its 100%-owned Huckleberry copper property located 70
km east of Kemano, B.C. The program has several objectives:

- To in-fill drill the East zone to bring reserves to proven status (7,622 meters). This will permit the calculation of a mineable reserve in a designed open pit and allow for a mining plan to be developed to maximize grade in the early years of production.
- To conduct 600 meters of exploratory drilling between the Main and East zones where late 1992 drilling in an angled hole intersected 0.51% copper over its last 60 feet in quartz diorite intrusive 700 feet below the surface. The program will seek to determine whether this mineralization comes to the surface.
- To explore east of the East zone where drilling stopped in 1993 with holes No.83 (310 feet of 0.47% copper) and No.87 (240 feet of 0.60% copper). A minimum of 1,200 meters is planned for this area.
- To test two areas of the Main zone for extensions of Main zone mineralization (1,372 meters).

A second drill has been brought in to expedite the program. (SEE GCNL NO.243, 20Dec93, P.1 FOR PREVIOUS PROJECT DETAILS)
