## NEW CANAMIN RESOURCES LTD.

[NNI-V] 8,522,958 shs.

VISUALLY GOOD - Alan Savage, president, New Canamin Resources CORE RETURNED Ltd., reports the resumption of diamond drilling to extend copper mineralization in the Main zone at the 100%-owned Huckleberry deposit 70 km east of Kemano, B.C. The new series of holes began to the southwest of the zone with visually encouraging results. The first four holes are located 150 m

west of the successful 1992 drilling. The new drilling is extending the zone of chalcopyrite mineralization alongside the contract between the volcanics and the porphyry stock. Drilling will continue to follow this trend which is open to the west.

Drilling has also completed four 150-meter holes in the geophysical anomaly between the Main and East zones and has visually indicated only pyrite with minor chalcopyrite. If this area contains no economic values, it will allow a short haul waste dump to be developed. Additional drilling in areas useful for potential tailings disposal, waste disposal and plant site will be carried out to establish that additional reserves are not present in these critical areas. The second drill has been delayed and will begin in-fill drilling on the high grade East zone about Feb22-24, (SEE GCNL NO.26, 8Feb93, P.1 FOR PREVIOUS PROJECT INFORMATION)
