## SWAY RESOURCES INC.

[SWY-V] 6,717,205 SHS.

ROCK CREEK DRILL RESULTS - Michael Noonan, director, Sway Resources Inc., reports Phoenix Gold Resources Ltd. (formerly Greenwood Gold Inc.) has advised of a significant gold intersection on the Ket 28 mineral claim located near Rock Creek, south-central B.C. Diamond drill holes 94 RMI-3C and 94RMI-1C returned the following values listed overleaf P.3.

Diamond drill holes 94RMI-2C is located 20 metres south of a 1990 rotary discovery hole that returned 20 feet of 0.25 oz.gold/ton which included a 5-foot section grading 0.553 oz.gold/ton.

The gold zone appears to be associated with a pyritic-bearing matrix-supported breccia, hosted by greenstone and propylite. The orientation of the gold-bearing breccia has yet to be determined. Another similar untested gold geochemical and geophysical target lies 400 metres due south of hole 94RMI-2C.

The Rock Creek - Jolly Creek structural gold trend is identified as having a strike length of about 18 km and contains numerous gold targets supported by geochemical, geophysical, geological and rotary percussion hole information. The area is also enhanced by a rich gold placer history and Camp McKinney gold mine which produced 82,000 ounces of gold. Sway Resources Inc. and Phoenix Gold Resources Ltd. together hold an option to acquire a 51% interest in the Ket 28 mineral claim and adjacent claims covering over 250 units. Sway also holds other interests in various claim blocks within the Rock Creek - Jolly Creek gold trend. Exploration in the area has been precipitated by the discovery of 1,800,000 ounces of gold at the Crown Jewel deposit about five km southeast of the Rock Creek - Jolly Creek Trend in northern Washington State. (SEE GCNL NO.115, 16Jun94, P.7 FOR OTHER PROJECT INFORMATION)
