**BOOKER GOLD EXPLORATIONS LTD.**

[BGE-V] 4,248,235 SHS.

**MINERALIZATION EXTENDED** - Hugh Grenfal, president, Booker Gold Explorations Ltd., reports the current trenching and drilling exploration program at the Hearne Hill property 65 km northeast of Smithers, B.C. has extended the porphyry zone by 150 metres south and 150 metres east. This was achieved by following up geophysical anomalies and a float train beyond the previously indicated borders of the porphyry system. The current program was designed to locate the source of high grade breccia boulders discovered last season. These boulders range in size from fragments to boulders exceeding 10 by 10 feet which assayed as high as 20.6% copper, 0.146 oz. gold/ton and 1.75 oz. silver/ton. The percussion drilling is continuing and has narrowed the target area significantly. The short holes that have been drilled must now be extended as they have only entered the alteration zone. Drilling will continue as planned with new targets being chosen for the next program. Mapping within the porphyry system has resulted in a high grade zone being located between previously drilled areas. This zone has an outcrop assaying 1.2% copper.

Booker can earn a 100% interest, subject to 4% NSR's. The company has only to issue 50,000 shares to exercise the option. (SEE GCNL NO.78, 25Apr94, P.2 FOR PREVIOUS PROJECT DATA)
