LA ROCK MINING CORP.

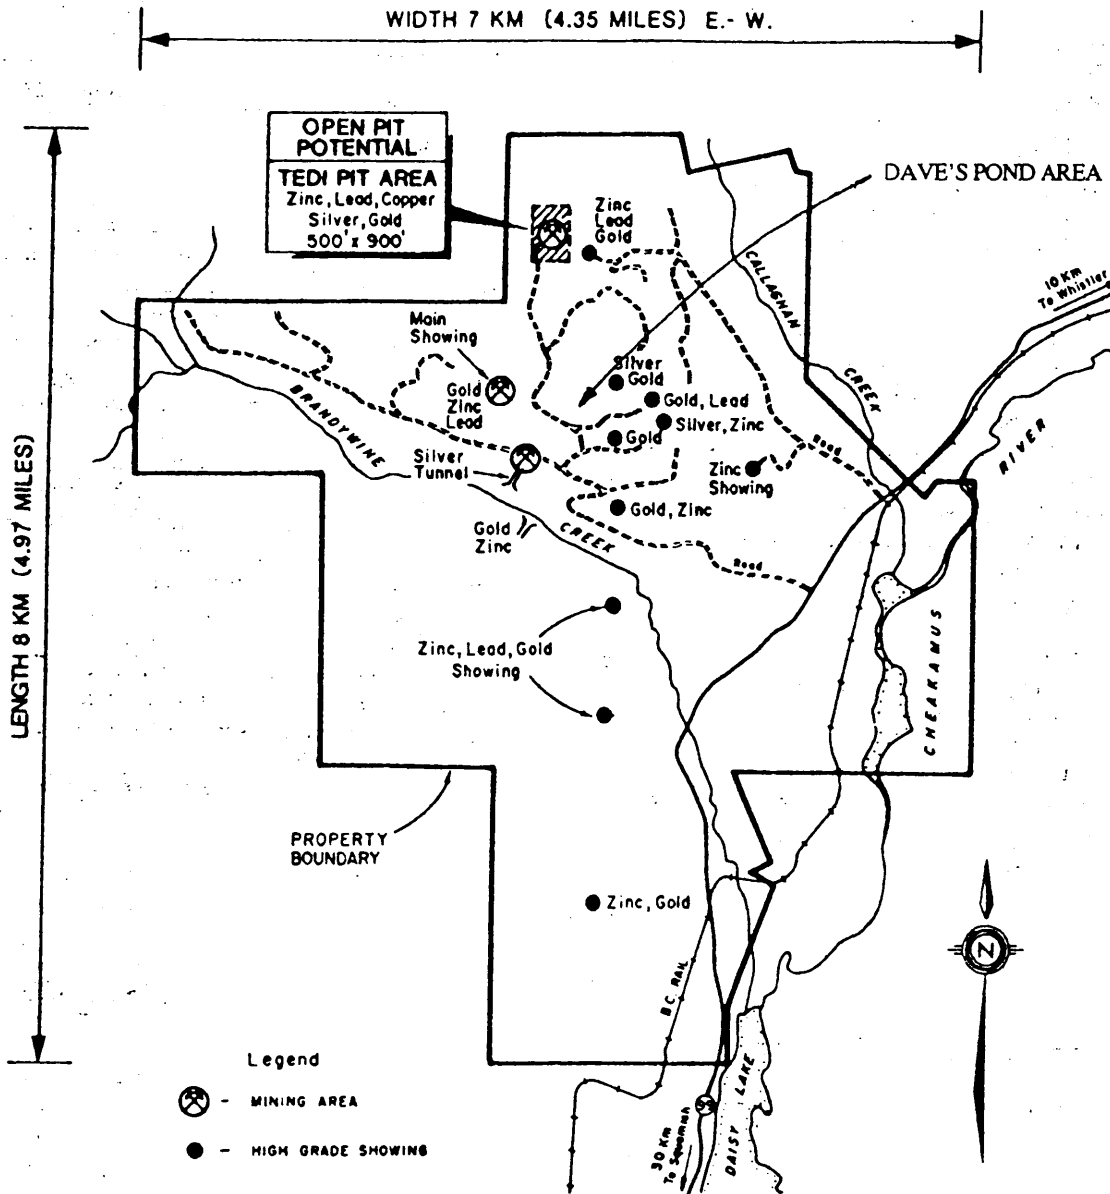

[LAR-V] 9,944,120 shs.

BRANDYWINE DRILLING RESUMES - David Simms, director, La Rock Mining Corp., reports after a short break drilling has resumed on the Brandywine property located 40 km. north of Squamish B.C. La Rock has a 100% interest subject to a 0.5% NSR. Drilling is continuing in the Dave's Pond gold zone. A total of seven holes were completed in the first half of the winter drilling program; see map and table of assays overleaf P.2.

The mineralization occurs in deformed, altered and veined rocks in the DP shear zone. The best gold grades are associated with quartz carbonate veins containing disseminated concentrations of galena, sphalerite, chalcopryrite and pyrite. Visible gold has been identified locally. The DP shear zone itself is up to 100 feet thick and of unknown strike length (possibly greater than 2,000 feet). This zone is open at both ends and to depth. In several holes, a number of distinct mineralized zones have been discovered. Drilling will continue at Dave's Pond to test mineralization along strike and to depth. (SEE GCNL NO.47, 9Mar94, P.4 FOR PREVIOUS PROJECT DETAILS)
