FURTHER HUCKLEBERRY DRILL RESULTS - Alan C. Savage,

president, reports new

Canamin Resources Ltd. has received further drill results from the Main zone at the 100%-owned Huckleberry copper project located 70 miles east of Kemano, B.C. Diamond drill hole 94-119, drilled 280 feet southeast of hole 94-117 (0.76% Copper over 450 ft), assayed 0.377% copper over 258 feet confirming a more strongly mineralized eastern edge of the Main zone than was previously thought. Holes 94-125, 126 and 128 were all drilled toward the northwest of the deposit near the extremity of the Main zone pit in this area. Main zone drilling was completed with hole 94-142. The drill has moved to the eastern end of the East zone where it will conduct step-out drilling from where the 1993 drilling stopped. This brings the number of drills on the East zone to two. Approximate footage drilled to date is 20,000 feet which constitutes one-half of the current drill program.

Kennecott Canada Inc. retains a right to back-in for a 60% interest at feasibility. (SEE GCNL NO.51, 15Mar94, P.1 FOR PREVIOUS HUCKLEBERRY DRILL RESULTS)
