MORE HUCKLEBERRY ASSAYS - Alan Savage, president, reports new Canamin Resources Ltd. has recieved further assays from the current drilling program at the 100%-owned Huckleberry copper project located 70 miles east of Kemano, B.C. In the Main zone southwest extension, hole 94-32, drilled vertically 100 feet west of previously reported holes 94-104 and 105 contained 0.507% copper over 224 feet. This hole represents a 100-foot westerly step-out in this area. In the East zone, hole 94-127 drilled at -60° carried 0.655% copper over 300 feet. This later hole was set up on the East zone and drilled to locate the southern edge of the zone and to be used in metallurgical testing of East zone mineralization. Kennecott retains a right to back-in for a 60% interest at feasibility. (SEE GCNL NO.57, 23Mar94, P.1 FOR PREVIOUS DRILL RESULTS)
