SB PROJECT UNDERGROUND - Tenajon Resources Corp. has reported results from the 1993 EXPLORATION RESULTS

underground program on the SB 50/50 joint venture with Westmin Resources Ltd. located about 35 km north of Stewart, B.C. A total of 50 meters of strike length of the West Kansas zone was explored by sub-drifting and diamond drilling. The reserves calculated for this strike length are 312,700 tonnes grading 3.07 grams gold/tonne, 0.108 oz. gold/t.

The material taken from the access raise and sub-drifts were milled at Westmin's nearby Premier gold project plant. Results from these mill runs averaged 2,647 tonnes at 3.265 grams gold/tonne, (0.115 oz. gold/t), and 30.82 grams silver/tonne. Gold recoveries averaged over 92%.

The West Kansas zone is open at depth and along strike. Previous wide-spaced drilling indicates the strike length of the West Kansas zone may be extended to over 300 meters and the down-dip extent may be doubled. Together, the detailed data from the underground program with the wide-spaced previous drilling, suggest the deposit has the potential for some 3,000,000 tonnes at a grade similar to the calculated reserve. Computer block modelling and economic studies are presently being conducted to further evaluate the potential of this deposit. (SEE GCNL NO.87, 6May94, P.1 FOR TENAJON DIAMOND PROJECT INFORMATION)
