METALL MINING CORP. [MLM-T, M]

GOATFELL CLAIMS FARMED OUT - James M. McDonald, president, reports White Knight Resources Ltd. has granted Metall Mining Corp. an option to earn a 60% interest in the 82 claim Goatfell property in south east B.C. by spending \$1,150,000 on exploration and paying \$300,000 in cash payments over 52 months. Goatfell is subject to an underlying 1.5% net smelter royalty to the original vendor.

Goatfell covers a tourmaline breccia pipe with sphalerite and pyromorphite and a large area of tourmaline chaotic breccia float boulders with galena, sphalerite and pyrrhotite clasts. Recent geologic studies suggest the eastward and down plunge faulted extension of the Kid-Star trough, where significant stratiform and vein-type zinc/lead/silver mineralization was recently discovered, trends across the central portion of the Goatfell property.

Impetus for further exploration at Goatfell results from the recognition of a strong zinc/lead/silver soil geochemical response at the Kid-Star stratigraphic level within the inferred eastward extension of the Kid-Star trough. Metall proposes to complete a Big-Loop electromagnetic geophysical survey over the geochemically anomalous areas, followed by drill testing.

The objective of exploration on Goatfell is the discovery of a large Sedex lead/zinc/silver deposit within the Aldridge Formation. The Sullivan lead/zinc/silver deposit is 80 km north of Goatfell within the Aldridge Formation. (SEE GCNL NO.98, 24May94, P.8 FOR WHITE KNIGHT'S GOATFELL PROPERTY TERMS OF ACQUISITION)
