## BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 4,357,035 SHS.

HEARNE HILL DRILL RESULTS - Hugh Grenfal, president, reports  
Booker Gold Explorations Ltd.  
has received assay results from DDH-94-5 on its Hearne Hill project  
located 65 km northeast of Smithers and 15 km north of the Bell  
Copper Mine in the Babine Lake District, B.C. The property is

100%-owned by Booker Gold subject to a 4% NSR which can be bought out with of cash or shares.

DDH-94-5 is located 300 feet east of the Texas Gulf hole HH 2 of 1967. The Texas Gulf hole averaged 0.228% copper to a depth of 449 feet. DDH 94-5 was drilled at a 45° angle, azimuth 332° to a depth of 710 feet across the target area. The top 144 feet cut across a well altered argillic zone and averaged 0.114% copper. The remainder of the hole, 144 feet to 714 feet (570 feet) averaged 0.214% copper and 0.114 grams gold/tonne for a copper equivalent of 0.3% copper over 570 feet. The zone appears to increase in grade to the northeast. Several breccia intersections were encountered and it is expected a breccia zone reaches surface due to the high grade float found down slope. The better intersections across the zone are given below:

FOOTAGE	COPPER %	SILVER OZ/T	GOLD OZ/T	WIDTH FEET	COPPER EQUIVALENT%
144-152	0.413	0.02	0.005	8	0.5
165-180	0.3	0.04	0.003	15	0.4
205-255	0.22	0.02	0.02	50	0.6
270-310	0.22	0.01	0.003	40	0.3
332-352	0.5	0.04	0.007	20	0.6*
420-447	0.5	0.03	0.007	27	0.6
513-544	0.33	0.05	0.004	31	0.4
679-714	0.3	0.03	0.008	35	0.5

\* Includes 5 feet of 1% copper and 0.012 oz. gold/ton

These assays represent 714 feet of the 5,000-foot drill program. The program continues and more assays will be released as they are received. (SEE GCNL NO.210, 2Nov94, P.2 FOR PREVIOUS PROJECT INFORMATION)
