FURTHER TAURUS MINESITE ASSAYS - David Hjerpe, president,  
reports International

Taurus Resources Inc. and Hera Resources Inc. have drilled 18 holes  
at the Taurus minesite, near Cassiar, northwest B.C., since its initial  
stockwork discovery hole.

Two drills are now expanding the drilling program. Preliminary  
results indicate a possible large open pit low grade gold mine. The  
companies are encouraged by the consistency of the grade. A  
summary of the latest holes, 62 to 66 are printed overleaf P.1.

Drill indicated reserves are about 15,000,000 tons averaging  
0.035 oz.gold/ton equalling some 525,000 in-situ ounces of gold  
from 18 drill holes. Added to the previously reported reserve of  
100,000 in-situ ounces, this brings the drill indicated total reserves  
to date, to 625,000 in-situ ounces of gold. The indicated tonnage is  
expanding as the drilling continues. The second drill has been  
moved to a second zone, about 1,000 feet southeast of the area of  
current drilling.

Hera owns 56% of International Taurus, which owns 100% of  
the 31 Sable claims and has optioned 10 more claims. (SEE GCNL  
NO.203, Oct.24/94, P.1 FOR PREVIOUS PROJECT DETAILS)
