POLYMETALLIC SHOWINGS FOUND - Leif Ostensoe, director,
reports Home Ventures

Ltd., reports new data from the Phillips Arm property, located about
50 km north of Campbell River on the Mainland of coastal B.C., has
outlined an area on the south side of Mt. Bagshaw which is highly
anomalous for copper, gold, zinc and molybdenum.

Samples are running over 0.3 oz. gold/ton, over 1% copper and
over 1% molybdenum. The anomalous zone is over three km long
and over one km wide. A gossan is reported on the south side of Mt.
Bagshaw and in the area a boulder is reported to have assayed 14 oz.
gold/ton.

This area will be the company's focus for exploring in 1994/95.
Other mineralized zones are known to exist, but none as yet as
important as this new discovery. Home can earn an 85% interest in
the core property and has staked (100%-owned) additional
contiguous ground. (SEE GCNL NO.164, 26Aug94, P.3 FOR
PREVIOUS PROJECT INFORMATION)
