BOOKER GOLD EXPLORATIONS LTD.

[BGE-V] 4,305,060 SHS.

FURTHER ENCOURAGING -Booker Gold Explorations has assays
ASSAYS REPORTED from the first two holes and the top half
of hole 3 on the 100%-owned Hearne
Hill project, 15 km north of Noranda's Bell copper on Babine Lake
65 km north of Smithers, B.C. Drilling is continuing and a second
larger drill is being mobilized.

The diamond drill holes were spotted as a result of ground and air
mag surveys and a percussion drill program. Percussion drill holes
grading over 0.2% copper with gold values exceeding 0.004 oz/ton
gold (0.14 g/t) were used as a guide to begin the diamond drill
program. The percussion drill holes ran to a high of 0.34% copper
and 0.007 oz/ton (0.24 g/t) gold. The diamond drill holes reached
highs of 0.668% copper and 0.06 oz/ton (2.068 g/t) gold. Silver
values are also anomalous with one 5-foot section assaying 0.45
oz/ton silver. The drill holes have intersected breccia, biotite
feldspar porphyry, and altered volcanics. Copper mineralization is
found in all rock types and an obvious precious metals zone is
developing. The area being drilled lies 400 feet northeast of the
Chapman Zone. (SEE GCNL NO.153, 11Aug94, P.2 FOR PREVIOUS
PROJECT INFORMATION)
