INTERNATIONAL SKYLINE GOLD CORP.

[ISC-V] 17,786,541 SHS.

BRONSON SLOPE DRILLING PLANNED - Clifford Grandison,
president, reports

International Skyline Gold Corp. will continue exploration of its Bronson Slope gold/copper porphyry deposit in 80 km north of Stewart, northwest B.C. with additional drilling of a zone discovered in May 1994. Bronson Slope has a drill indicated geological resource of 100,000,000 tonnes, including 20,000,000 tonnes of 0.25% copper, 0.71 grams gold/tonne and 2.65 grams silver/tonne.

The proposed drilling is designed to test both tonnes and grade between the surface and the 400-meter elevation and test the undrilled resource from 400 meters down to the 200-meter elevation with the primary objective of adding tonnes.

A program of mapping the Bronson Slope gold/copper porphyry system resulted in a report recommending a minimum of three and a maximum of six holes. Drilling these holes is expected to intersect vein structures sub-parallel to Snip veins which appear to contain copper and gold. Skyline has engaged Brazier-Vera Associates, electrical consultants, to prepare a preliminary report on power options including possible Alaska hydro power which could lower costs and improved the economic viability of the project.

A preliminary economic evaluation of the Bronson Slope gold/copper porphyry system indicated the property has the potential to become a gold/copper producer if exploration is

successful.

Final assay results have been received from drill core samples of the Aztec copper/zinc/silver prospect in Coahuila State, Mexico. Two areas were drilled: the San Agustin breccia zone and the Camacho mineralized dyke zone. At the San Agustin zone, complete metallic sulphide leaching was encountered. At the Camacho zone, mineralization similar to surface exposures was encountered in drill core areas over narrow widths. Skyline will plan an induced polarization survey to locate drill targets

Skyline has arranged a private placement of 687,500 flow-through shares at 40¢ per share Canadian properties exploration. (SEE GCNL NO.141, 25Jul94, P.4 FOR PREVIOUS BRONSON SLOPE PROJECT INFORMATION).
