ABACUS MINERALS CORP.

[AMC-V] 4,276,855 SHS.

ISKUT AREA CLAIMS ACQUIRED - W. Barry Girling, director,
Abacus Minerals Corp.,
has reported the acquisition of the Lake property in the Iskut River
area, Liard Mining Division, B.C. The Lake property was staked
during August exploration on the company's Forrest property.

The original discovery on the property consisted of a series of
sulphide boulders up to two meters in diameter. These boulders
contain semi-massive to massive sphalerite/galena/tetrahedrite/
chalcopyrite mineralization in a carbonate breccia. Samples taken
during the staking of the property returned the following values:

SAMPLE NO.	GOLD PPM	SILVER OZ/T	ZINC %	COPPER %	LEAD %
5601	810	69.7	9.03	1.23	0.07
5603		76.8	38.40	1.58	.77
5604	320	25.6	13.50	.43	2.21
5605	600	60.4	17.10	1.08	8.25

These boulders have been traced up the talus slope to the toe of a
glacier. A bedrock source of similar sphalerite/tetrahedrite carbonate
breccia mineralization has been located at the edge of the ice. From
the limited exposure examined, the carbonate breccia would appear to
be at least 12 feet wide. More detailed work will be undertaken on the
Lake claims during the 1995 field season. (SEE GCNL NO.184,
26Sept94, P.5 FOR OTHER PROJECT INFORMATION)
