BRADDICK RESOURCES LTD.

[BRO-V] 2,280,000 SHS.

DRILLING TO START - Braddick Resources Ltd. plans to start diamond drilling on the 100% owned Northern Vancouver Island Steele Creek property, near Bonanza Lake on 1Sept94. Targets are geochemical and geophysical anomalies supported by surface mineralization explored in July, 1994 field work..

The program discovered a broad magnetic high to the east of the northern "F" zone plus nearby magnetite, pyrite, chalcopyrite, and epidote mineralization. These findings suggest an underlying mineralizing intrusive. Values of copper 1.3% and gold, one gram per tonne, were discovered in a pink garnet skarn on the southern "D" zone. The skarn host extending over a considerable area, has significant tonnage potential. Braddick is testing this skarn zone in the current drilling program. (SEE GCNL NO. 118, P.1, 21JUN94).
