**SPOKANE PROPERTY DRILL RESULTS - Spokane Resources Ltd.'s consultant, Dr. Hugh Morris, P.Eng., has reported assay results have been received from holes 94-7 through 94-15 on the Spokane gold property located northwest of Lillooet, southwest B.C.** The project is held 75% by Spokane and 25% by International Enexco Ltd. All of the holes drilled are at 90°. Average values for the mineralized intervals are printed overleaf P.1. It should be noted these results are of a preliminary nature and further interpretation is in progress. However, some comments can be made: Holes 94-7, 94-12 and 94-14 intersected a post-mineral dyke which appears to cut across the zone on its northern side and the close association of gold with copper values continues consistently. Drilling is continuing. Future holes will test the unexplored extension of the thicker intersections obtained in holes 94-8, 94-13 and 94-15 at the western end of the zone. (SEE GCNL NO.156, 16Aug94, P.1 FOR PREVIOUS PROJECT INFORMATION)
