MORE ASSAYS RECEIVED - Ron Smith, president, Spokane Resources Ltd., reports further assay results have been received for drill holes 96-16, 96-17, 96-18 and 96-19 completed in August on the Spokane gold property, Lillooet Mining Division (Spokane 75%/International Enexco Ltd. 25%). All of the holes were drilled vertically:

HOLE NO.	INTERVAL METERS	LENGTH METERS	GOLD OZ/T	SILVER OZ/T	COPPER %
Location 4+00W 0+968					
94-16	55.83-59.81	3.98	0.055	0.27	0.62
	64.05-65.40	1.35	.374	.49	.95
Location 4+00W 1+228					
94-17	64.60-66.12	1.52	.079	.65	1.48
Location 4+00W 0+718					
94-18	51.02-58.93	7.91	.645	.86	2.03
Location 4+25W 0+878					
94-19	57.15-61.57	4.42	.075	.27	.50

Individual assays range up to 1.4 oz.gold/ton and have not been cut in calculating the above averages. Core recovery has been good, generally exceeding 95%. Assay results are expected shortly from holes 94-20 and 94-21 which were completed further east along the mineralized zone. It is recommended future drilling concentrate on potential westward extension of the trend of better grade and thicker intersections obtained in hole 94-18 and in holes 94-15, 94-8 and 94-13 previously reported. (SEE GCNL NO.171, 7Sept94, P.1 FOR PREVIOUS DRILL RESULTS)
