NEW CANAMIN RESOURCES LTD.

[NNI-V] 9,333,824 SHS.

New Canamin Resources has reported East Zone drill results.

HOLE NO.	INTERVAL	LENGTH FEET	COPPER %	SECTION
94-209	88-200	112	1.027	2133 Piezometer Hole
94-201	60-596	526	.669	2266 Mineable within
	360-596	236	.827	pit limits

The grade and continuity of the proposed high grade starter pit in the East Zone is now well defined by drilling. As noted in previous press releases, Kilborn Engineering Ltd. is scheduled to complete a feasibility study later in September 1994.

New Canamin Resources Ltd. is developing the 100% owned Huckleberry porphyry copper property, subject to no royalties, located 100km south-east of Kitimat, B.C. Proven and probable in-situ reserves are over 175,000,000 tons grading 0.475% copper, with molybdenum and gold and silver by-product credits. There is potential to expand reserves to over 200,000,000 tons.
