TOODOGGONE GOLD ASSAYS - Henry Meyer, president, reports
AGC Americas Gold Corp. has received gold assays from the Phase I drilling program at the 100%-owned JD property located in the Toodoggone region some 200 miles north of Smithers, B.C. The 5,000-foot, 21-hole program was designed to evaluate the structure of two known mineralized zones on the eastern section of the property. SEE ASSAYS OVERLEAF P.2.

Due to the significance of discovery hole 18 (0.535 oz. gold/ton over 20 feet), management has approved the immediate start of an additional 2,000 to 3,000 feet of drilling. The main purpose is to test this discovery at depth and establish drill indicated tonnage.

The results have confirmed management's structural theory for mineralization for this zone. The company awaits both preliminary and final assays (including silver values) from both zones. In addition, results from this year's extensive geophysical and geochemical program are being compiled. (SEE GCNL NO.168, 1Sept94, P.3 FOR PREVIOUS PROJECT INFORMATION)
