## ECSTALL MINING CORP.

[EAM-V] 3,935,000 SHS.

ENCOURAGING AKIE DRILL RESULTS - Chris Graf, president, Ecstall Mining Corp., and Metall Mining Corp. jointly announce results from recent drilling on Ecstall's 100%-owned Akie claims located in the Kechika Trough zinc district of northeast B.C. Metall holds an option to acquire a 60% interest in the Akie property by spending \$1,500,000 in exploration and making property payments. SEE LONGITUDINAL SECTION OVERLEAF P.1.

Drill hole A-94-11, one km north of the discovery drill holes, A-94-3 and A-94-4, and 600 metres north of holes A-94-5 and A-94-7, has intersected mineralization over 16.1 metres (from 337.2 to 353.3 metres) grading 5.4% zinc and 1.11% lead (including sections of 11.2 metres of 7.53% zinc and 1.25% lead, 6.4 metres of 9.84% zinc and 1.54% lead and 3.9 metres of 10.56% zinc and 1.66% lead).

Results were also received for shallower drill holes, A-94-8, 9 and 10. A-94-8 and 9 were drilled 400 metres north of A-94-11. A-94-8 intersected 9 metres of interbedded argillite and laminated pyrite-sphalerite. A-94-9 intersected 37 metres of interbedded argillite and laminated pyrite 200 metres downdip from the A-94-8 intersection. Only a thin intersection of massive sulphide horizon was intersected in A-94-10 due to a local fault. A table of values for these drill holes follows:

HOLE NO.	INTERVAL METRES	LENGTH METRES	ZINC %	LEAD %	ZINC+LEAD %
A-94-11	337.20-353.30	16.10	5.40	1.11	6.51
	337.20-348.40	11.20	7.53	1.25	8.78
	337.20-343.60	6.40	9.84	1.54	11.38
	339.70-343.60	3.90	10.56	1.66	12.22
	351.50-353.30	1.80	8.02	2.87	10.89
A-94-10	233.60-237.20	3.70	.16	.02	.18
A-94-9	308.80-314.40	5.60	.79	.14	.93
A-94-8	173.90-179.80	5.90	2.68	.41	3.09
	173.90-174.60	.70	11.30	1.29	12.59

Drill hole A-94-12 has also been completed 150 metres downdip of hole A-94-7 and intersected the mineralized zone over 30 metres (from 449.7 to 479.1 metres). Assays from A-94-12 are pending.

Drilling to date on the Akie discovery has intersected zinc-bearing sulphide mineralization along a strike length of 1.4 km over a dip length of 300 metres, and is open along strike and downdip. The results from drill hole A-94-11 indicate that the grade of the Akie deposit is increasing at depth, with sections containing ore grades over mineable widths. (SEE GCNL NO.169, 2Sept94, P.1 FOR PREVIOUS PROJECT INFORMATION)
