FURTHER ASSAYS FROM RED - Camnor Resources has reported  
 MOUNTAIN LOOK-A-LIKE results from further drilling at the  
 Willoughby property located 26

km east of Stewart, B.C. and 6 km east of Lac's Red Mountain  
 property where reserves in excess of one million ounces of gold have  
 been reported. Camnor can earn a 50% interest in the property from  
 Gold Giant Minerals by spending \$600,000 on exploration over 3  
 years and making payments of \$225,000 over the same period. The  
 1994 field season, at the Willoughby property, included 17 diamond  
 drill holes totalling 5,817 feet on four mineralized zones.

The Willoughby property hosts at least eight gold and silver  
 prospects, most of which are located within or near a porphyry stock  
 that underlies part of the Willoughby Nunatak.

On the North Zone, mineralization is hosted in the porphyry  
 stock. Most recent results are summarized below.

HOLE NO.	INTERVAL FT	LENGTH FT	GOLD OZ/T
94-26	175.8-179.1	3.3	0.676
	248.0-267.7	19.7	.534
94-27	249.0-255.6	6.6	.455
	279.1-289.0	9.9	.968
or	249.0-289.0	40.0	.319
Surface samples: 28 continuous samples over 55 ft. averaged:			.780
This zone is open to the south.			

Silver values will be reported when available.

These results and earlier results outline a zone approximately  
 100 feet in length by 210 feet in depth, and is open down dip and  
 along strike to the south. Earlier drill holes that intersected the zone  
 are:

HOLE NO.	INTERVAL FT	LENGTH FT	GOLD OZ/T	SILVER OZ/T
89-06	72.2-139.4	67.2	0.73	5.37
94-15	216.5-254.9	38.4	1.17	3.20

Results from three other zones most recently drilled; Wilby,  
 Upper Icefall and Willow zones are pending.

When all assays from the last several holes and surface samples  
 from several zones are received, a complete compilation and review  
 will be undertaken and reported.
