CANMARK INTERNATIONAL RESOURCES INC.

[CNM-V] - 4,314,084 SHS.

ZEOLITE SUPPLY CONTRACT AWARDED - Christopher Lee, president, reports.

Canmark International Resources Inc. has signed a contract to supply 5,000 tonnes of zeolite. The agreement is with Sun-Ray Resources Ltd., a private B.C. company involved in the research, development and manufacturing of zeolite products. The contract provides for supplying 2,000 tonnes of zeolite with an option for an additional 3,000 tonnes within a year.

Canmark's zeolite deposit is near Princeton, southwest B.C. with proven reserves of 3,500,000 tonnes and probable reserves of 39,000,000 tonnes. The property is easily accessible to a major highway and to transportation. The development of the property needs little work to supply the contract. Engineering work is advanced with the pre-feasibility study having been completed. The company has received approval from the Province of B.C. for a bulk sample permit. Canmark has posted a reclamation bond with the B.C.'s Ministry of Mines, Energy and Petroleum, Resources as a requirement of the permit.

Zeolite is a generic term for an environmentally friendly mineral (clinoptilolite) with Canmark's material showing no harmful toxins. Zeolite can be used for gardening, stockfeeds, aquaculture, sewage treatment, water filtration, "kitty litter" and pollution control applications.

Canmark is pursuing discussions with a number of other companies that have expressed interests in purchasing zeolite. In addition, Canmark's zeolite is being tested by a number of different companies and government agencies for a variety of environmental applications.
